

E-Z Mender — Timber Fence Post Repair Bracket

Material: Carbon Steel 2.7mm thick

Finish: Black Powder Coating

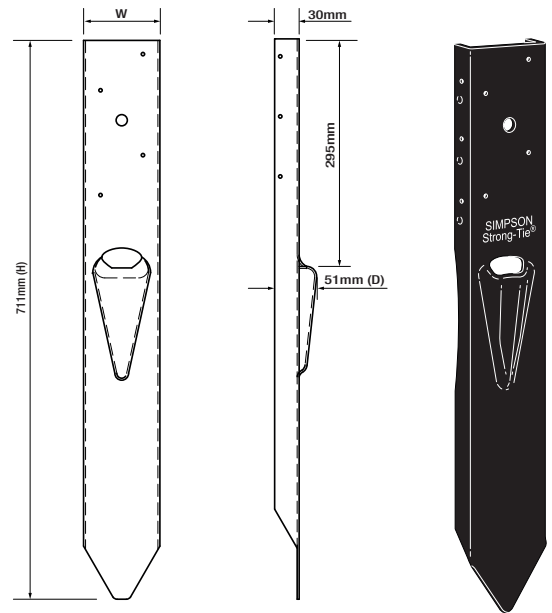

Size: See illustration on the right and table below

Features & Benefits

- Repair and reinforce 75mm or 90mm fence posts easily and economically
- Suitable for posts installed in concrete or dirt
- Reinforces weakened posts without having to replace the post or concrete
- Installed individually or in pairs (sold individually)

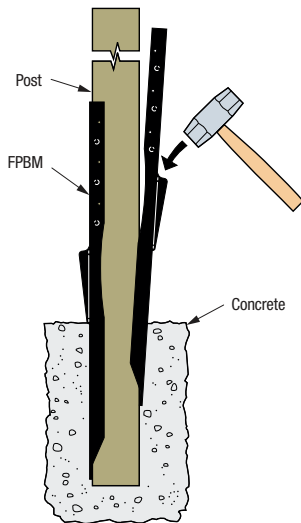

Installation

- Use all specified fasteners
- Remove dirt or debris from around the existing post
- Drive the mender plate down along the post between the post and the dirt or concrete, ensuring that the plates are driven 280mm into the ground for full penetration
- Repeat on opposite side of the post if required
- Fasten to post using the following or equivalent fasteners Strong-Drive® SD Connector Screw (SD9112R100 — #9 x 38mm) or Strong-Drive® SCN Smooth Shank Connector Nail (N10DHDG-R — 38 x 3.75mm Nails)
- Fill the hole around the post with concrete
